Lab Assignment 2 Report

INSTRUCTORS OF LESSON

Assoc. Prof. Dr. Sultan Kocaman Gökçeoğlu

Res. Assist. Recep Can

First Week's Report

In my homework, I first found the unknown parameters and the coefficient matrix. I then created new pixel values. But I did not get a image output.

Second Week's Report

In the second part of the assignment, I found sigma naught, parameter correlation and standard deviation values for each transformation and showed them on the plot.

Third Week's Report

In the third part of the assignment, I could not obtain any photo output, So I could not get any result of the codes I researched and written. So I am sending you the code I wrote. I researched and learned what is conscious interpolation. I did my best to write my own code without using the library. I have done more research on the subject by doing strict research. But I had a hard time doing research, and this assignment was tiring for me but also educational.
